

AutoClick

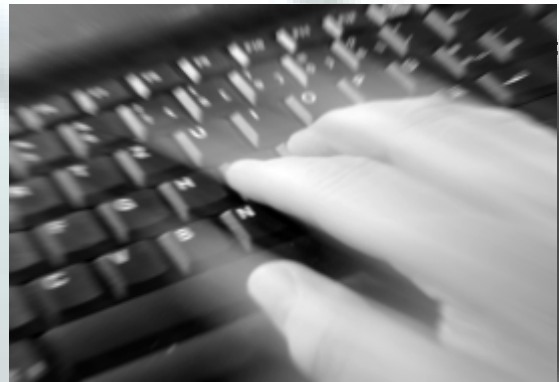

Automatic capture, learning more every day!

An interminable deluge of paper has made automatic capture tools a must for many companies. Incoming mail solutions and computer capture aim to extract key information from scanned documents which can then be transferred for further processing to follow-up back office systems such as ERP, WaWi or ECM. The capture process is often manual, that is capture is performed by typing in the data, this is often the only solution when existing OCR tools are too expensive or when documents are too unstructured. Software solutions for automatic capture often require a high volume of documents to function efficiently.

Furthermore, rules or search criteria are

Automatic tools often require continual maintenance, i.e. adjustment to new document types. This is time and cost intensive.

The solution: AutoClick

AutoClick accepts batches of scanned documents and checks whether it already has a record of the type of document. Naturally, AutoClick will not be able to recognize any document it does not have a record of and it then automatically switches to "learning mode". The learning mode teaches AutoClick to recognize the information sought. To do this, you simply click on the values which are already known to ClickReader. There's no "copy and paste" or "drag and drop", just a click! It's faster and easier.

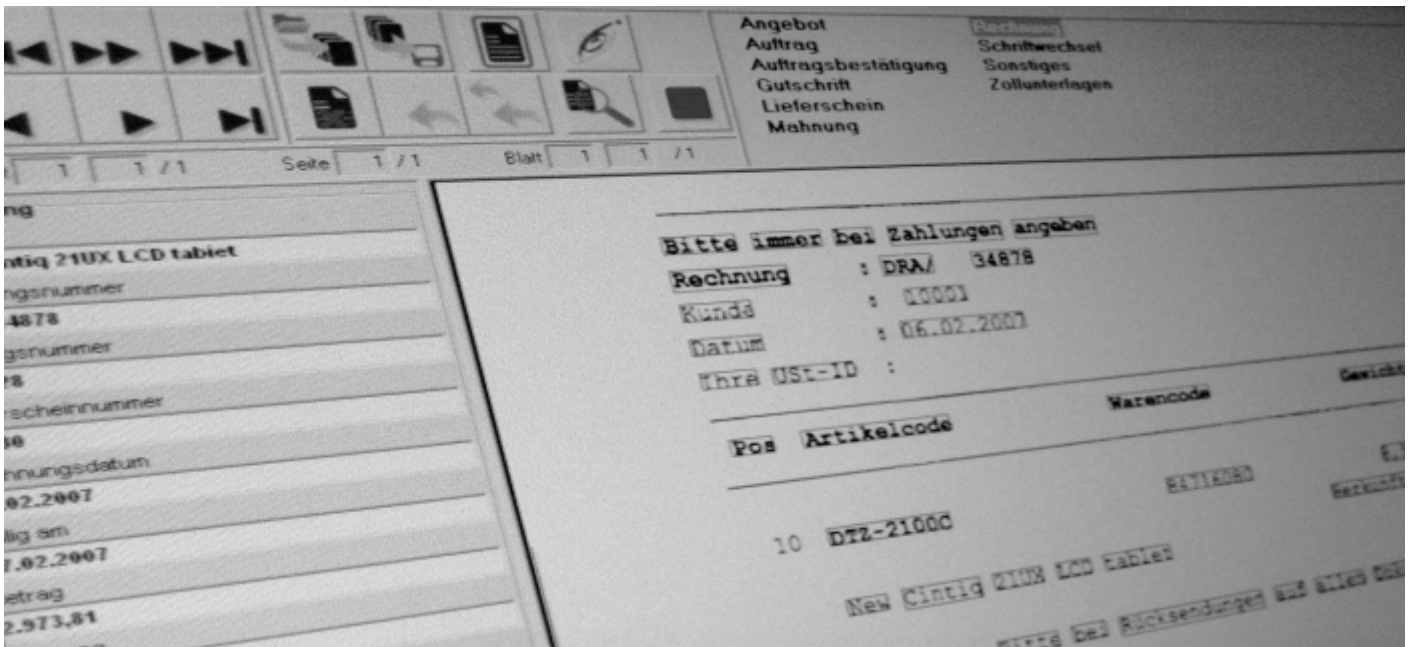

It takes just a few clicks to train AutoClick to recognize a new document type – no technical

required to find the terms being located. The more precise the formulation of the search criteria, the more likely it is that the term being sought will be found. Precise formulation requires experience and specific knowledge, which is expensive to purchase.

expertise or programming required – and it takes very little time.

From now on, AutoClick will recognize this document type, for example a document from a business partner, and will be able to capture it automatically.

The number of documents needing to go

minute and does not require any specialist knowledge, it makes sense to put all new documents through the recognition process.

If a business partner changes a layout or document construction, AutoClick will select the training mode for the document. The document is put through the recognition process again and from now on AutoClick will recognize both versions. Because AutoClick is so flexible, the often obligatory and intensive administrative effort is reduced to a minimum.

AutoClick from One Click Solutions is a solution which makes the automatic capture of information much easier and a solution which is very user friendly. Then there is the inescapable fact that this solution really is capable of learning, learning right from the very start.

Incidentally, AutoClick runs on Microsoft Windows XP and Vista platforms.
